

# The Plant Song

<https://www.youtube.com/watch?v=N-l-gsWOKzk>

I'm gonna tell you all about the plants,  
All of the parts and how they grow.  
Now just sit right down and enjoy this song,  
Your lesson starts right now and here we go...

There's a root,  
That absorbs the water.  
It helps the plant to stand up tall.

The roots form a stem,  
And the stem supports the plant, oh  
It sends nutrients to them all.

And then there's leaves,  
So important.  
The leaves capture all the sun.

Then leaves make food,  
To form a flower, oh  
Now all the plants can reproduce.
